Case Study

Hedge Fund

Client Profile:

New York based Hedge fund looking to implement their forex trading strategies quickly and efficiently.

Problem:

The fund had worked with a few consulting firms that did not understand the traders language, and were not capable of delivering solutions quickly. Time to market was essential for the fund, as their algorithmic strategies needed to be developed quickly.

Solution:

Edge Financial Technologies' team worked with fund's traders to create several algorithmic trading strategies that were put into production in record time. Edge engineers applied Edge's proprietary methodology to create results quickly and accurately. Several results came out of the project: A framework for creating new strategies quickly, back testing tools to measure performance for each strategy, visual tools to monitor performance in real time, and production trading strategies including Arbitrage, trend following and more.
